

Apache Plume / Cinder Sparse Vegetation (5)

Location. This map class is common and widespread, except in the southwestern corner and the western edge of the mapping area. It is best developed on lava outcrops mixed with volcanic cinder. It consists of sparse to dense stands of apache plume, generally with few associated species.

Photosignature. The characteristic signature for this map class consists of irregular small grayish white to blue-white speckles set in a matrix of smooth black cinder or rough black lava. The pink dots of trees are very sparse or absent.
